

# Incorrect Data Displaying in Study Personnel

## Problem

Person added to Study Personnel listing, via Add model displays incorrect information.

## Solution

Why the problem occurred: Person added to Study Personnel listing, via Add model, was entered incorrectly (first name, last name, email). When an IACP analyst accesses study personnel, deletes record **and** adds again to try and correct the issue, the information will still be incorrect.

When adding an individual to a protocol's Study Personnel it is important that all information be entered correctly. If a problem occurs as described in the problem section, the issue must be corrected by the O.R.C.A Administrator. [VPR-IT@uthscsa.edu](mailto:VPR-IT@uthscsa.edu) should be notified of the issue.
